Benefits

Triple illumination

The instrument is equipped with triple illumination. The water surface can be illuminated with white, blue or blue/white glare-free light.

Precise temperature adjustment

The desired working temperature is reached after approximately five minutes. The temperature can be adjusted easily and precisely. The electronic temperature control is set over the touch-screen.

Clear touch-screen display

The clear and user friendly digital touch-screen on the front of the pfm Waterbath 1000 displays all current user settings.

Protective devices

In addition to protection against overheating there is a minimum water level sensor. The mains connector is set inside the housing to protect against splashes of water.

Easy to clean and maintain

The housing of the pfm Waterbath 1000 is made from one complete block of aluminium. The light anodised surface is easy to clean. The tank itself is made completely from black anodised aluminium.
