

WE MOVE PEOPLE

Patient Transfer from the Expert –
To Make It Easier for Your Back.

Over 30 Years for a Healthier World

Already over 30 years ago, Transatlantic successfully introduced rollboards to the German and international market, significantly changing the way of how to transfer a patient. Until today, we are able to convince with our many years of experience and our courage to continuously innovate.

We are constantly focused on the highest quality in safety, hygiene and handling for the patient and the care taker when developing and selecting our products.

Our Know-how Sets Us Apart

Our intelligent solutions for lateral or sitting transfer, as well as our special aids, support nurses in clinics, radiology, care for the elderly and disabled as well as emergency response teams.

With easy handling, back-friendly working and optimal patient comfort, our Transaroll boards and sliding boards make your daily routine easier.

We Help You to Help Others

Your patients trust you. This is why you need a partner you can trust. With us, you found a partner who supports you professionally in the areas of medical supplies, and care and who made it their task to provide and guarantee the optimal care for your patients.

You will receive competent support and advice in selecting the right products for you by our qualified medical product consultants. Whether innovative developments, fair novelties or proven products, our team will surely find the right solution for your request.

Our own production allows us to realize your individual wishes – don't hesitate to contact us.

For Us, Quality Is Not an Option, It Is Our Priority

As a manufacturer and distributor of medical devices, we are audited and certified according to ISO 9001:2015 and ISO 13485:2016. Of course, our medical devices have passed the relevant conformity assessment procedure and thus bear the CE mark.

Our Sales Channels – For Over 73,000 Customers in More than 30 Countries Worldwide

Direct sales to clinics, health care supply stores, pharmacies, nursing homes, etc.

National and international B2B business

Standard, Mini, Ambu, Long, Special, Slim – What Does It Mean?

Standard, Mini, Ambu, Long, Special and Slim are the sizes of our Rollboards.

Please note that the sizes may vary $\pm 3\%$.

- **Standard:** 180 x 50 cm. Our most common size, as the boards can be used in all areas.
- **Mini:** between 95-82 x 50 cm. The boards are primarily used in gynecology and proctology because it allows a transfer even when the legs are raised.
- **Ambu:** between 86-75 x 45-40 cm. Due to their small size, they are particularly suitable for short distances and transfers, such as for narrow stretchers in the ambulance service. In addition, they are very space-saving in storage and can also be stored underneath a stretcher.
- **Long:** 195 x 50 cm. They are especially suitable for large patients and for beds without disturbing head and foot parts.
- **Special:** 150 x 60 cm. They are particularly suitable for patient relocations where a greater distance must be bridged.
- **Slim:** 120 x 40 cm. They are particularly suitable for transfer from the stretcher in the emergency room.

For a smooth patient transfer, the heaviest points on the body must be placed on the rollboard - the shoulders and pelvis. That's why our standard sized Transaroll boards are the most common. They can be used in all areas and provide a comfortable transfer for patients and users, as both the head and the heels are placed on the board. In our portfolio you will also find special solutions for surgeries with leg elevation (Mini), for ambulances and the emergency department (Ambu, Slim) as well as for very large or obese patients (Long, Special). However, especially the width of the rollboard is decisive for its operational capability. The wider the rollboard, the longer distances can be bridged.

Whether a rollboard is foldable or not does not affect its transfer properties. They can only be stored more space-saving, for example in our wall storage Organizer (see p. 8).

Benefits

CORE	Ultra light foam
COVER	Hygienic, anti-bacterial sliding cover
ENDS	Plastic trailing edges with loops

- The classic – proven for over 30 years
- Usable in many different areas
- Loops for an easy storage

Why a Rollboard?

There is a large assortment of different products in the range of aids for lateral transfer. For example, there are sheets or inflatable air mattresses with sliding function. Rollboards were introduced to the German and international market more than 30 years ago. They consist of a core and an endless gliding cover. Different manufacturers use different materials for this, which can lead to quality differences between the individual products.

Previous studies have already shown that, compared to sheets or air mattresses with sliding function, rollboards are those aids that have the least impact on the (lower) back, spine and shoulders of the caregivers. This is due to the fact that the core of the rollboard provides a stiff surface for the patient so that they can slide over the core with the help of the gliding cover. That way, the frictional resistance during transfer is significantly reduced.

This allows nursing staff to prevent common musculoskeletal disorders. Musculoskeletal disorders are not only health problems, but also have a socio-political significance. The incapacity of work and early retirement caused by musculoskeletal disorders are extremely frequent and costly. Thus, a company prevention is urgently needed. For the nursing profession, whether in home or inpatient care, this means that work can and must be facilitated by special aids, such as a rollboard.

3 Good Reasons

- **Back friendly**
Healthy nursing staff
- **Simplifying work**
More time for the patient
- **Economic**
Up to >1000 uses*

*Depending on model and care of the rollboard

Standard

Ambu

Transaroll Smartboard- Standard

180 x 50 cm, foldable

Article-No. 4400102

Transaroll Smartboard - Ambu

86 x 40 cm, foldable

Article-No. 4400101

Benefits

- CORE** Board welded in polyester fabric
