

Higher quality of life with technology from SUSPA

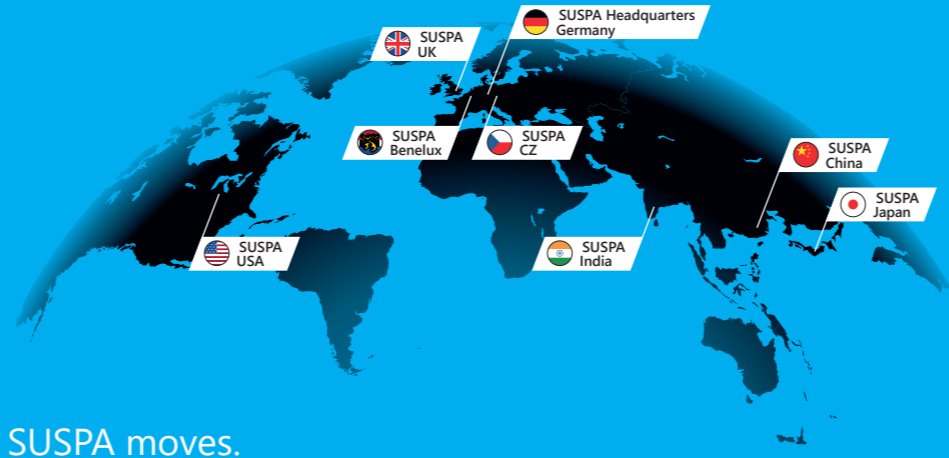

Chronically ill people, injured patients or people with physical constraints are dependent on support for their movements and in their daily life. A self-determined support independent of third parties improves quality of life significantly.

SUSPA technology can help here: thanks to variable adjustments, beds, wheelchairs or tables can easily be adjusted to meet a multitude of needs. At the same time, the height adjustment systems from SUSPA make the work of qualified personnel easier. They help saving effort and support during the patient care. Moreover, since adjustment systems from SUSPA can be installed in the smallest of spaces, there are no limits regarding design and layout.

SUSPA Comfort for a better life
