

Bionic 880 for the specific Photon Therapy

The **Bionic 880** is our most successful device for the supporting treatment of chronic bacterial infections.

Patients have observed that there was no evidence for an active Lyme Borreliosis shortly after the treatment with the **Bionic 880**, the application of nosodes and necessary detoxification.

Doctors and Therapists can receive further information about the **Bionic 880** device after registering on our website.

The **Bionic Health Care** is the ideal device for individuals and non-medical professionals.

The development of the **Bionic Health Care** was based on the **Bionic 880**. Due to its energetic effects, the **Bionic Health Care** is particularly suitable for health prevention purposes.

Please do not hesitate to contact us if you would like to receive further information about the **Bionic 880** or the **Bionic Health Care** device.

Photon Therapy for cellular regulation

Human cells produce small light particles, so called quanta or photons. These photons transport information from cell to cell in the form of light beams (biophotons). The exchange of information between neighboring cells can be disturbed if a cell is sick.

Severe bacterial infections, such as Lyme Borreliosis, can have significant effects on the exchange of information between cells, because information cannot be received correctly nor passed on.

The result is that our biological system loses balance, the immune defence is weakened and Lyme Borreliosis with its multiple symptoms can develop and progress.

The Photon Therapy is a well known and approved supporting treatment option.

A specific amount of light can help cells to

- transport bacteria out of the cell
- decrease toxic impact
- regulate and normalise the cell metabolism.

How does photon therapy work?

As photons are light quanta they are able to modify the intracellular space. Treatment with photons is able to induce Borreliosis, as well as other pathogens located inside, to leave the cell. When in extracellular space, pathogens can be defeated more easily and be eliminated. Of course, this "change of environment" has to be accompanied by appropriate detoxification and drainage therapies.

Can photon therapy be used for other diseases as well?

Photon therapy applied by the device Bionic 880 provides the basis for successful treatment of various diseases. Thanks to the experience of many Bionic therapists we are able to present treatment strategies qualified for various indications and directly implementable in practice.

The treatment concepts are an important part of the Bionic 880 therapy, available as free proven treatment tips for each therapist having purchased the Bionic 880.

Moreover, there are many reports from daily practice which are continuously updated and complemented.
